Functional testing types

Smoke testing

testing step to check if software is ready for further testing

Usability testing

reveals whether the application or the product is user-friendly or not

Integration testing

methodology used to test individual components or units of the code to verify interaction between various software elements

Regression testing

performed to ensure that implemented changes do not impact current functionality

Acceptance testing

performed to make sure the software handles required tasks in real scenarios, according to specifications

Installation testing

checks if software application is successfully installed and works as expected

Configuration testing

testing a system compliance with each of the supported software and hardware configurations

Localization testing

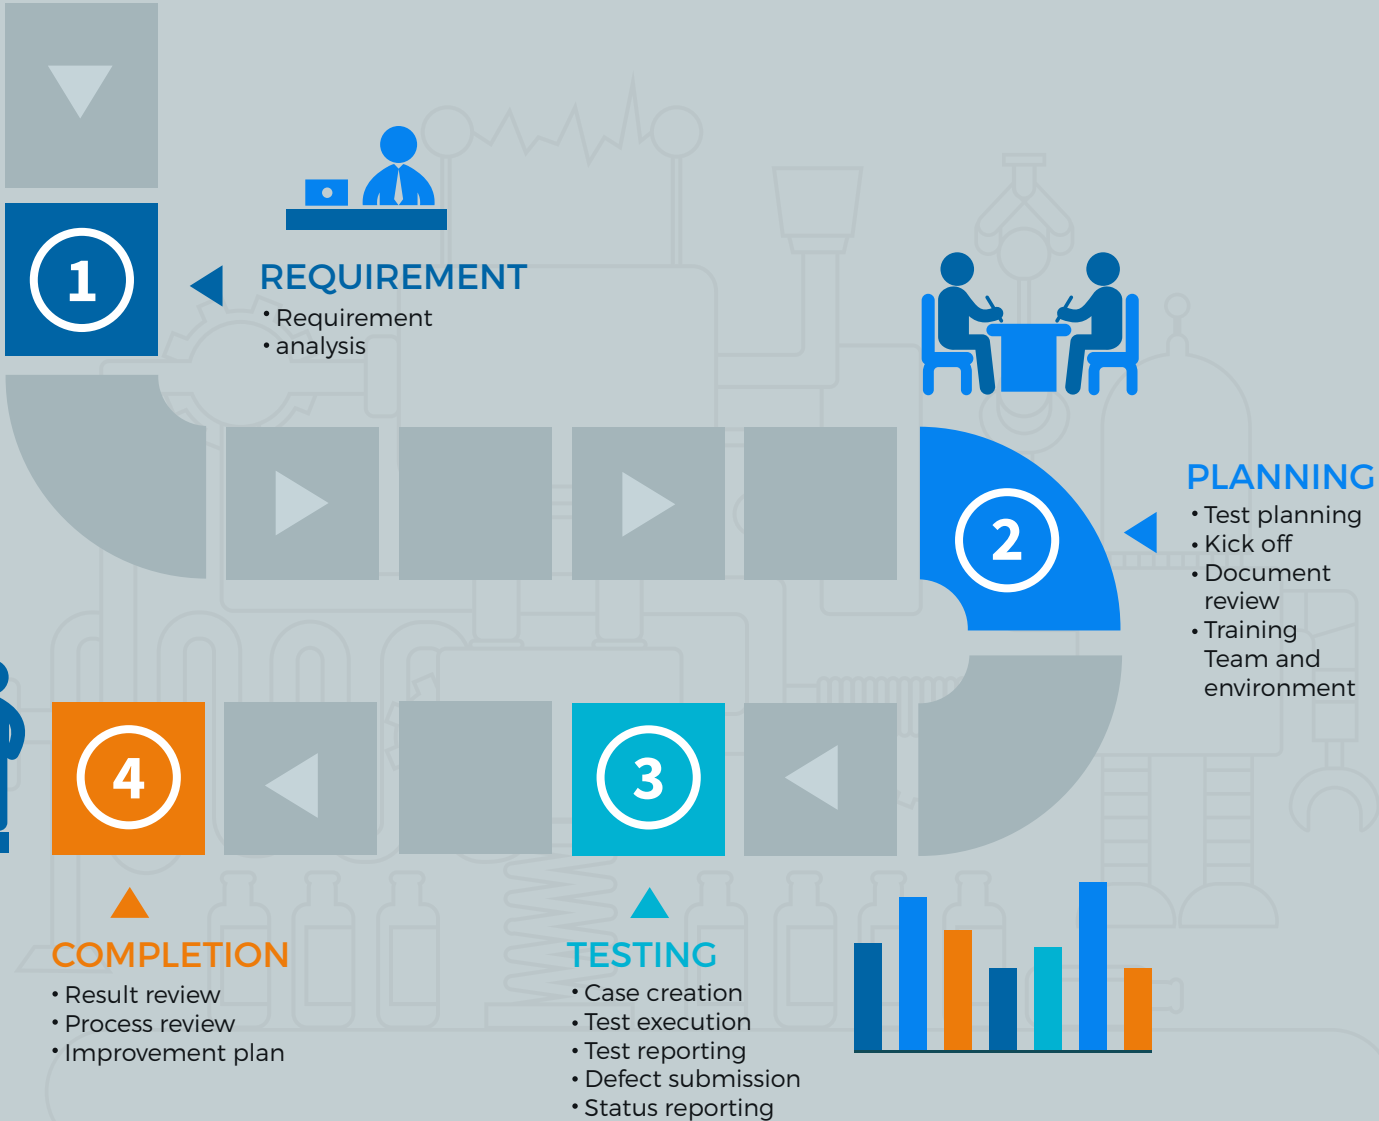

- performed to verify the quality of a product's localization for a particular target culture/locale and is executed only on the localized version of the product

Documentation testing

testing of the documented artifacts that are usually developed before or during the testing of Software
